

# Installation Instruction for Shadow SH 020 Professional Multi Purpose Transducer

**Content:**

Transducer  
mounting adhesive

1. Locate the best position on the instrument for optimum sound quality and output.
2. Apply an even amount of included adhesive to the bottom of the pickup.
3. Press pickup firmly onto the instrument.
4. Make appropriate electrical connections. Use the core wire for the hot output and the shield for the ground.

**Note:**

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance input.
