

Installation Instruction for Shadow SH 076 Piezo Bridge Pickup

Content:

Bridge pickup with saddle; fits 8mm slot

1. Remove strings.
2. Disconnect the pickup output connection and remove original pickup.
3. Feed the wire through the hole in the bridge, place the new pickup and reconnect the output.
4. Reinstall the strings and retune the instrument.

Note:

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance input.
