

Installation Instruction for Shadow SH 4001 Saxophone and Clarinette Transducer

Content:

Transducer
mounting adhesive

Mounting:

Use enclosed non-hardening adhesive and attach it to the black side of the pickup. Then simply press the pickup with adhesive to the reed. Plug into amplifier.

Removal:

Gently pull the pickup away from the reed. The adhesive will not mark the reed and is reusable.

Note:

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance input.
