

Installation Instruction for Shadow SH 926 Arch Top Mandolin Bridge with Piezo Pickup

Content:

Mandolin bridge with built in Piezo-Pickup,
Volume and tone control,
3.5mm (1/8") socket with double sided adhesive,
12 foot plugcable 6.3 mm/3.5 mm (1/4" to 1/8"),
Cable holder

1. Loosen strings and remove original bridge.
2. Test fit the new bridge in place of the original with the output wire toward the rear.
3. In necessary, shape the feet of the bridge to fit the top of the instrument or adjust string height.
4. Reinstall the bridge, adjust string height and retune instrument.
5. Remove the protective foil from the applied double sided adhesive on the volume and tone controls and mount in a convenient location on the instrument.
6. Connect to an appropriate amplifier with included instrument cable.

Note:

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance input.
