

Installation Instruction for Shadow SH 930 G 6 String Banjo Bridge with Piezo Pickup

Content:

Banjo bridge with built in Piezo-Pickup and 3.5 mm jack
Volume and Tone control with velcro
12 foot plugcable 6.3 mm/3.5mm
Cable holder

1. Loosen strings and remove original bridge.
2. Mount new bridge instead of original bridge and tune your instrument.
3. Remove the protective foil from the applied double sided adhesive on the volume and tone controls and mount in a convenient location on the instrument.
4. Connect the plug into the "IN" input jack of the volume and tone control.
5. Connect to an appropriate amplifier with included instrument cable.

Note:

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance.
